
CLAIMS: I claim:

1. A multiple person hammock comprising a fabric bed having means of suspension at each longitudinal end thereof to a spaced anchor wherein, said suspended fabric bed is made more taut along the longitudinal center than said fabric bed is along its lateral sides.
 2. The closure of claim 1 wherein said body of material is laterally stretched by a spreader pole.
 3. The closure of claim 2 wherein, said spreader pole is collapsible.
 4. The closure of claim 1 wherein said body has four supporting stabilizer lines having means for attachment of outer lateral corners of said body to a point on nearest said spaced anchors other than that of said body, wherein said body is stabilized and supported on and along said bodies lateral edges.
 5. The closure of claim 4 wherein said supporting stabilizer lines are adjustable.
 6. The closure of claim 1 wherein, the said body has a shelter structure attached to said body.
7. A hammock or tent comprising a tent pole structure wherein, said tent pole structure supports a raincover and means are provided to retract and reattach said raincover over said tent pole structure.
 8. The closure of claim 7 wherein, the action of retracting and reattaching of said raincover may be wholly performed from the inside said hammock or tent enclosure.
 9. The closure of claim 7 wherein, said raincover can be completely removed from hammock or tent.
10. suspendable bed having tension straps and a means of tensioning said bed between spaced anchors wherein, one of said spaced anchor is directly used as a way of gaining a mechanical advantage in tensioning said bed.
 11. The closure of claim 10 wherein, said mechanical advantage is gained by a wrapping of said tension straps around said spaced anchors. wherein, said spaced anchor is used as a pulley.
